Whether it's an animal, a vegetable or a seed, the size of a foodstuff is often the differentiator between who gets it first and who gets it last. The amount of food we consume has increased astronomically in recent decades and will continue to do so unless we make changes to our behavior. We need to change a few things. To start, we have to give up our cultural obsession with calories and embrace the concept of food miles. We are quick to condemn the other, but we should learn from our mistakes. Our propensity to compare calories per mile and pounds per bird means we have become better at making a national public discourse out of the calories in food. In a similar manner, we have become increasingly comfortable criticizing the speed, productivity and efficiency of industrial food production. And for the most part, we have come to accept these industrializations as inevitable. We have extended our sense of community to the point that we now take for granted food distribution networks that are totally dependent on short-term, just-in-time, demand driven systems. They are desperately deficient when it comes to replenishing stocks at the point of need, and they do not deal with the damage that happens to food as it makes its journey through their pipelines. The proof of this is all around us. We feed our cities with enormous amounts of food that will never be eaten, and we b7e8fdf5c8

She writes about the pioneers of women's rights, the lives of Elizabeth Cady Stanton and Susan B. Anthony, and the lives of women in their time: Eleanor Roosevelt, Margaret Sanger and feminist lawyer, Jane Addams. The course concludes with an examination of how women have taken control of their own lives throughout history, an examination of the twentieth century women's movement, and a discussion of the challenges and successes faced by women since the 1960s.
