As well as being a futurist writer and, as it were, a prophet (in that he predicted the dangers of artificial intelligence long before many others), Max Tegmark has recently become one of the most influential physicists working on the foundations of quantum theory today. The following excerpt is drawn from his new book, Where is Everybody?, which draws together some of his most difficult-to-find ideas. It is raining hard here in Massachusetts, and (contrary to the "sun is up" signs) the moon is a glowy ball that casts an eerie light across the countryside. You can see a flash of lightning, but it isn't anywhere close. The feeling of stress came about because I had no clue how to carry out the tasks I had. I tried to give this work to God and to meditate on how He wanted me to use it, but I was worried about making "errors" (e.g. missing deadlines) and about my inability to grasp the significance of the points I was making in my writing. It's an intriguing question that has fascinated philosophers and historians as far back as ancient Greek philosopher, Socrates. In the present day, philosophers and psychologists continue to debate what exactly constitutes humor, whether it's an affective, a cognitive or a social nature. According to some theorists, humor is a basic and universal human activity or mood that originates from and is shared by all human beings. James Kilgore, a humor researcher, proposed that human beings are predisposed to looking for humor in life and that laughter is an essential part of life itself. Humor helps us adapt to life's stresses and survive adversities, but some people are apparently unable to laugh with enjoyment, as if the ability to laugh is a normal and essential aspect of being human. T h e r e w a s n o t many researches on the subject. It was studied mostly by psychologists. One of the first to focus on humor was the French psychoanalyst Jacques Lacan, a contemporary of Freud. He studied both children and adults and made a distinction between primary and secondary humor. He also suggested that humor arises out of sexual phenomena. Lacan identified the psychoanalytic concepts of the specula, the mirror and the phallus. Through these Freudian concepts, Lacan explained why humor is the result of some kind of satisfaction about the world and also of the world itself. In her book, The Human Animal, "Mary Thomaselli, a humor researcher, argued that humor is a basic response to life's stresses and therefore a social product of a community. "Humor has social as well as personal origins," she wrote. "It is not a second person illusion in the way that feelings are more genuine when they are directed outward, to others. Although humor is not an inborn socialized response, individuals learn to appreciate its effects and to exchange jokes and humorous stories with friends, families and especially with the opposite sex." Mary Thomaselli also proposed that the origins of humor lie in our ability to detect patterns and to make assumptions about the way things are and about people. One of the ways we allow
